Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities: Although element “9” is illustrated in Figure 3, it is not identified or discussed in the Specification.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Houston et al.

Houston et al teach a decentered lens for eyewear wherein the optical center of a lens is located near the upper rim of the lens (Figure 11A) as claimed in independent claim 1. However, Houston et al fails to teach the optical center being within a range of 2mm above or below the upper rim of the lens as claimed, but does teach that the centerline of the lens may or may not pass through the lens (column 2, lines 49-50). Houston et al also illustrates the optical centerline (Figure 11A) such that it would be apparent to one of ordinary skill in the art that the optical center line (Figure 11A, element 132) to be within the 2mm range of the lens rim (Figure 11A, element 152) as claimed in the instant invention. Therefore, it would have been obvious to one

of ordinary skill in the art at the time the invention was made to use the lens of Houston et al with an optical centerline within the design requirements to reduce optical distortion.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hwang (WO 94/20878) teaches half lens spectacles.
